Important fire safety information for the building trades, specifiers, professionals and do-it-yourself installers:

When rigid vinyl siding is exposed to significant heat or flame, the vinyl will soften, sag, melt, or burn and may thereby expose the material underneath. Care must be exercised when selecting underlay materials because many underlays are made from organics that are combustible. You should ascertain the fire properties of any underlay prior to installation. All building materials should be installed in accordance with local, state and federal building codes and fire regulations.

WINDLOAD PROPERTIES:

All Gentek siding products are designed to withstand a minimum of 100 mph windloads and are suitable for most areas. The products can be used in areas with higher windloads, but installation procedures, choice of product and building code jurisdiction are important factors to be considered. The windspeed rating (in mph) is calculated using VSI's windspeed calculation guidelines. Additional information is available if required.

BUILDING CODES:

Gentek vinyl products meet or exceed the following building code specifications:

ICC-ESR – 1133
CCMC – 06541-L
New York City MEA 132-94-M
FHA/HUD Minimum Property Standards

For architectural specifications of designer siding and other products, please see your local Gentek dealer.

GENTEK ALUMINUM SIDING AND SOFFIT

ALUMINUM METAL PROPERTIES:

Alloy or equivalent.. AA3000
Specific Gravity 2.72
Modulus of Elasticity (ksi) 10,000
Melting Range (°F) 1175-1210

COATING PROPERTIES: Gentek aluminum products are manufactured with AA3000 series alloy (or equivalent). Both sides of the aluminum are cleaned with a specially formulated cleaner. The cleaned aluminum is then treated with an acid solution containing chrome to enhance corrosion resistance and coating adhesion.

Polyester (Poly) Topcoat: The topside of the pretreated aluminum is coated with a thermoset polyester polymer which is dried and cured at about 450 °F, forming a hard but flexible and weatherable coating. Total coating thickness is approximately 18 micrometers.

WEATHERING AND TESTING: Gentek products are tested for superior adhesion and forming properties. Gentek's stringent colour specifications allow batch to batch mixing of product. Product testing includes colour, film thickness, gloss, hot water/impact test, freezer/impact test, salt spray, humidity testing (1000 hours) and outdoor exposure (2 years).

COMPLIANCE: The aluminum alloys used meet the ULC Standard CAN4-S114-M80, defining the noncombustibility of aluminum alloys.

WARRANTY: 40 Year Limited Warranty. Warranty is transferable.

CONTACT WITH DISSIMILAR MATERIALS AND CORROSIVE ENVIRONMENTS:
Direct contact of aluminum products with certain dissimilar materials, or contact with water runoff from dissimilar materials, is likely to result in corrosion. Accordingly, care should be taken during installation to avoid such contact of aluminum with dissimilar materials, including: dissimilar metals (copper, zinc, steel, etc.), concrete, stucco, asbestos siding, pressure treated/pretreated lumber, masonry, corrosive non-metallic materials, and roofing materials or roofing systems containing metallic granules or strips. Seacoast or other corrosive environments may result in corrosion of the product.

NOMINAL GAUGES (mm):

GENTEK STEEL SIDING

METAL PROPERTIES:

Steel or Equivalent	*AZ-50*
Specific Gravity	*7.8*
Minimum Ultimate Strength (KSI)	*45-55*
Minimum Yield (KSI)	*40-50*
Minimum Elongation (%)	*25-35*
Modulus of Elasticity (KSI)	*29,500*

Melting Range (°F) Zinc	*786*
Thermal Conductivity at 77°F (btu-in/ft²-hr-°F)	*555*

COATING PROPERTIES:

Gentek steel siding products are manufactured with AZ-50. Both sides of the steel sheet are cleaned with a specially formulated cleaner, water rinsed and then coated with an environmentally safe chemical pretreatment to enhance corrosion protection and coating adhesion.

The pretreated surface is coated with a thermoset corrosion-resistant polymer. This corrosion-resistant polymer is topcoated with the following polymeric systems:

Plastisol (PVC) Topcoat: This highly weatherable, flexible, chemical-resistant thermoplastic polymer is melted and fused at temperatures of >390°F. The coating is applied with a striated pattern or smooth finish having an average film thickness of 3.0 mils.

Fluoropolymer (PVDF$_2$): This thermoplastic polymer has excellent chemical and fade resistance. The coating thickness is 0.9 mil. The system is cured at a minimum temperature of 475°F. This polymer system conforms to the high industry standards of Kynar 500® and Hylar 5000®. The main criteria for these standards is that the paint formulation must contain a minimum of 70% PVDF$_2$. Many fluoropolymer coatings on the market do not meet the high quality and performance standards required by Kynar 500 and Hylar 5000 specifications.

WARRANTY:

All Gentek steel siding brands carry a Lifetime Limited Warranty. *Warranty is transferable if home is sold. See printed warranty for complete details.*

CONTACT WITH DISSIMILAR MATERIALS:

Direct contact of steel products with certain dissimilar materials, or contact with water runoff from dissimilar materials, is likely to result in corrosion. Accordingly, care should be taken during installation to avoid such contact of steel with dissimilar materials, including: dissimilar metals (copper, zinc, steel, etc.), concrete, stucco, asbestos siding, pressure treated/pretreated lumber, masonry, corrosive non-metallic materials, and roofing materials or roofing systems containing metallic granules or strips.
