The Gentek® Window Collection: One System, More Ways to Build
Designed to bring more range and less compromise to residential construction

BURLINGTON, Ontario – April 27, 2026 – [Gentek Building Products Co.](#) introduces the [Gentek® Window Collection](#), a new vinyl window system assembled in Canada, for replacement and new-construction projects. The collection unites today’s design expectations, smooth operation, and year-round energy efficiency in **one connected, easy-to-spec solution** for dealers and builders.

Built around the 4000 Series and 3000 Series, the Gentek Window Collection **delivers more glass, cleaner aesthetics, and strong thermal performance**. Both series feature slim frames that help brighten interiors with more natural light, while the collection gives customers more ways to address varying wall conditions, installation methods, and project needs—all backed by Gentek’s Canadian-built quality.

- The **4000 Series features a 4-1/2” frame** that positions the glass farther inward and closer to the warmer side of the wall, which improves interior comfort. It is available in popular styles including double hung, single hung, slider, casement, awning, picture and architectural shapes.
- The **3000 Series features a 3-1/4-inch frame** with a narrower profile for a more minimal look, while also offering expanded configurations such as bay, bow, basement, and hopper windows.

“We see this launch as a smarter way to support how our customers sell and specify windows,” said Philippe Bourbonniere, Division President, Gentek. “It helps connect product choice, application needs, and dealer conversations in a way that feels more straightforward and complete.”

The Gentek Window Collection carries that streamlined approach through a well-aligned mix of performance features and finishes across the portfolio. Available glass offerings include **EnergyPlus™, Solar Shield™, and Quattro glass packages**, along with optional triple-glazed configurations and **Quanex® Super Spacer® technology** to support thermal efficiency and align with ENERGY STAR® requirements.

Customers can also choose from **20 standard painted exterior colours**, along with **Armour Guard™ premium matte-black finish** that delivers bold, modern contrast with added surface hardness and lasting visual appeal. Across the collection, features such as integrated accessory grooves expand finish and configuration possibilities, while different brickmould profiles and an optional retractable nailing flange make 4000 Series and 3000 Series windows more adaptable to more build scenarios.

The result is a high-performance window collection built for today's homes, tomorrow's expectations, and the realities of residential construction.
