FEATURES

Easy to Handle & Install

Rigid, yet lightweight structure which is easy to carry, cut, and hold level, enables easy installation.

Weather Resistance No Color Fading

UV protection technology prevents color changes and will stay attractive for a long time.

Maintenance Free

No need to sand, coat or paint. Easily washable with water.

Pre-Finished & Stainable

Prefinished panels that do not need further treatment throughout the lifetime of the product, plus stainable products that offer countless opportunities to personalize your facade.

Durable

Suitable for all weather conditions and temperature.

Impact Resistance

Highly scratch and impact modified for every circumstance and climate.

Suitable For Any Architectural Style, Any Conditions

Both **NUEBOARD** and **NUECLAD** are designed and engineered to allow for limitless architectural styles and applications. **NUEWAL** products can be used to fully clad a building, or to simply accent various features. They can create a dynamic facade by breaking up large expanses, or visually tie together dissimilar structural elements. They suit every architectural style. **NUEWAL** products provide the freedom to create your ideal facade. Durable enough to cover exterior walls with maximum exposure and stylish enough to use on interior accent walls.

A perfect solution for all applications. Available in a wide range of colours to address all tastes and designs, easily adds beauty and uniqueness to facades for a long period of time with no challenge.

- ▶ New Generation of cladding products for exterior and interior application.
- ▶ A simple yet premium solution for all climate conditions and temperatures.
- ▶ Reliable quality and durability.
- ▶ Engineered and produced in Canada using the latest technology and expertise.
- ▶ Warm feel of wood, while lasts for a long period of time with no maintenance need.

NueBoard Channelled
Color: Dark Winchester
Code: NU02.02.06

NUEWAL provides the timeless aesthetic and warmth of wood, while delivering enhanced durability, longevity, and value to your home.

NUEBOARD

Versatile Facade Solution

NUEBOARD can be installed vertically or horizontally on the most complicated residential and commercial projects. The Channelled style is the classic option, accurately mimicking traditional siding styles, and without the need for maintenance, it effortlessly lasts for many years. The visible shadow line allows for many design opportunities. It can easily be paired with other siding options including brick, stucco and stone, which can reduce overall cost without sacrificing style.

Being easy to cut and handle, enables installers to play with layout to get the most appealing look. There are various finishes and patterns and could fit in modern, contemporary, and traditional styles.

Channelled Joint - Siding & Cladding

This panel comes with a 10mm (1/2") gap in between the planks with a visible line on the wall, which adds a design to the wall.

This type is preferred when looking for a minimalist design.

NUEBOARD

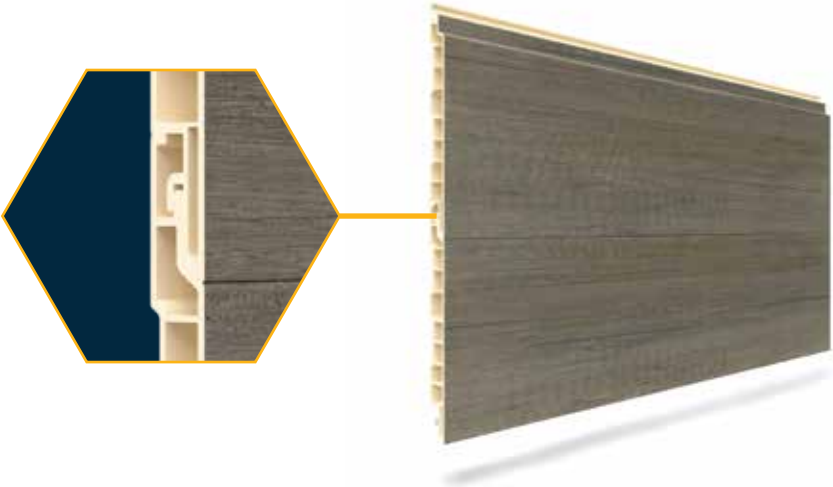

Versatile Facade Solution

The flat panel style is similar to the channelled style in coverage, but forgoes the shadowline for a simple seam line that is less visible overall. It creates a smooth, clean looking facade that is ideal for modern or minimalist designs.

With the use of our trims and accessories you can be confident in the weatherability of your building's facade.

NueBoard Flat
Color: Dark Winchester
Code: NU 02.02.06

Flat Joint Siding

This panel provides seamless finish, ensuring that there are no visible joints in between the panels.
This is typically preferred when looking for a flat surface with seamless finish.

You can reach us at info@nuewal.com to learn how **NUEWAL** can help you with your siding and soffiting needs.

NUECLAD

Right Choice to Differentiate from Conventional Soffits

NueClad comes in a variety of finishes, colors and patterns. A true decorative solution for interior application. Stainable NueClad creates a natural wood finish.

V. Groove Joint gives a flat and flush surface with a narrow line between the panels.

There are different options for ventilation purposes based on the design and preference.

NueClad can be perforated to keep the continuity of the panels or the vent strip profile can be used in between the panels.
